### **DETAILED ACTION**

1. This communication is responsive to your preliminary amendment to the specification dated 1/12/04. Claims 1-23 as originally filed are pending in this application.

### ***Drawings***

2. The drawings were received on January 12, 2004. These drawings are acceptable.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Dorri et al. P.N. 5,565,831 (Dorri).

Dorri discloses a shielded magnet for MRI. Applicants attention is directed to Fig.2 and corresponding description. The magnet system features a plurality of main magnet coils such as 40 and 44. Provided radially outward of the main coils are a plurality of shielding coils such as 46 and 62. The coil combinations are designed to provide a low fringe or stray field. See col. 6 lines 46-60. Note that bucking coils are also provided for shaping the magnetic field in the imaging volume. See col. 2 lines 21-27. The shielding is provided as is well known in the art to eliminate the effects of undesired magnetic fields on electronic equipment operating routinely beside the MRI magnet.

5. Claims 21-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Crozier et al. P.N. 5,818,319 (Crozier).

Crozier discloses methods for designing actively shielded magnets for Magnetic Resonance Imaging. See Example 1 at col. 12 and note the main and shielding coils 72 and 74. Col. 6-12 describe how the design of the shielded magnet can be optimized using a computer optimization program. Note that fringe field requirements are defined as described for example in the third paragraph of col. 9. Crozier meets all the limitations of the claims at issue.

6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Mansfield and Shvartsman et al. disclose active shielding methods for MRI magnets. See Fig 25 in Mansfield. Note the design criteria in Shvartsman et al.
